SKILLS

Languages: JavaScript, TypeScript, Python, SQL (Postgres), HTML/CSS,
Frameworks: React, Tailwind CSS, Node.js, Fast API, Material-UI
Developer Tools: Git, VS Code

OBJECTIVE

Results-oriented software engineer with a passion for developing innovative and scalable solutions. Seeking a challenging position within a dynamic organization that values creativity, teamwork, and a touch of excitement. Committed to leveraging my technical expertise and problem-solving skills to deliver high-quality software products that exceed user expectations and drive business success.

EXPERIENCE

Web Developer   September 2022 – Present
Main Street Billiards   *Gainesville, FL*

- Created captivating user interfaces, harnessing the power of cutting-edge front-end technologies to create delightful and visually stunning web experiences that leave users spellbound.
- Crafted visually compelling and intuitive user interfaces, utilizing modern front-end development techniques to create immersive web experiences that captivate users and enhance brand identity.

Freelance Web Developer   Jan 2022 – Present
Various Clients   *Remote*

- Developed and delivered full-stack websites using TypeScript, Next.js, React, and Tailwind CSS, resulting in dynamic, responsive, and visually appealing user interfaces.
- Utilized Postgres for efficient database management, ensuring seamless data storage, retrieval, and querying functionalities.
- Collaborated closely with clients, translating their requirements into technical specifications, managing project timelines, and delivering tailored solutions that met their needs.

PROJECTS

Villion Chat | *JavaScript, React, Firebase*   May 2023 – Jun 2023

- This Full Stack Chat App is a dynamic web application that enables users to register, sign in, and engage in real-time conversations with their friends. With this app, users can create an account, log in securely, and search for other users to add them as friends. Once friends are added, users can exchange text messages in a seamless and intuitive messaging interface.
- The Full Stack Chat App was built using JavaScript for the programming logic and React for the front-end development. The powerful combination of JavaScript and React allowed for the creation of a responsive and interactive user interface. For the back-end, the app utilized Firebase, a cloud-based platform, which provided a secure and scalable infrastructure for user authentication, real-time database management, and efficient messaging functionality.
- By leveraging JavaScript, React, and Firebase, this project successfully brings together front-end and back-end technologies, enabling users to connect, communicate, and build meaningful relationships within a user-friendly and reliable chat application.

EDUCATION

The Odin Project   Remote
Full Stack JavaScript Curriculum   *Jun. 2021 – Oct 2021*

Free Code Camp   Remote
Full Stack Developer Certification   *Aug. 2021 – Dec 2021*
