TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL, HTML/CSS,
Frameworks: React, Tailwind CSS, Node.js, Fast API, Material-UI
Developer Tools: Git, VS Code

OBJECTIVE

Relentless software engineer seeking a challenging position within a dynamic organization that values creativity and teamwork, with a touch of excitement. Committed to leveraging my technical expertise and problem-solving skills to deliver high-quality software products that exceed user expectations and drive business success.

WORK EXPERIENCE

Freelance Web Developer — Jan 2022 – Present
Various Clients — *Remote*

- Developed and delivered full-stack websites using TypeScript, Next.js, React, and Tailwind CSS, resulting in dynamic, responsive, and visually appealing user interfaces.
- Utilized Postgres for efficient database management, ensuring seamless data storage, retrieval, and querying functionalities.
- Collaborated closely with clients, translating their requirements into technical specifications, managing project timelines, and delivering tailored solutions that met their needs.

Junior Front-End Software Engineer — Sept 2022 – Feb 2023
Main Street Billiards — *Gainesville, FL*

- Developed and implemented compelling front-end user interfaces that played a key role in driving significant business growth.
- Crafted visually compelling and intuitive user interfaces, utilizing modern front-end development techniques to create immersive web experiences that captivate users and enhance brand identity.

TECHNICAL PROJECTS

Real Time Chat App | *JavaScript, React, Firebase* — villion-chat.vercel.app

- A dynamic web application that enables users to register, sign in, and engage in real-time conversations with their friends. With this app, users can create an account, log in securely, and search for other users to add them as friends. Once friends are added, users can exchange text messages.
- The powerful combination of JavaScript and React allowed for creating a responsive and interactive user interface. For the back-end, the app utilized Firebase, a cloud-based platform, which provided a secure and scalable infrastructure for user authentication, real-time database management, and efficient messaging functionality.
- By leveraging JavaScript, React, and Firebase, this project successfully brings together front-end and back-end technologies, enabling users to connect, communicate, and build meaningful relationships within a user-friendly and reliable chat application.

Timeblend | *JavaScript, Typescript, ReactJs, NextJs, Chakra Ui, Firebase* — timeblend.fyi

- TimeBlend is a modern scheduling tool designed to streamline the process of finding the optimal communal time to meet.
- Designed an intuitive and user-friendly interface that enabled users to schedule meetings and coordinate availability across multiple participants effortlessly. Implemented robust algorithms to intelligently analyze participants' calendars and identify overlapping free time slots, simplifying the process of finding mutually convenient meeting times.

EDUCATION AND COURSES

The Odin Project — Remote
Full Stack Developer Curriculum — *Jun. 2021 – Oct. 2021*

Free Code Camp — Remote
Full Stack Developer Certification — *Aug. 2021 – Dec. 2021*

Neetcode.io — Remote
System design, Object-Oriented Design, and Advanced Data Structures and Algorithms — *Jan. 2023*
